

Translation into English of Claims 1 to 4 of DE 878 076

1. Sight window for liquid containers, in particular for electric devices, e. g. switching devices, characterized in that one or more openings in the container wall are filled with a transparent or translucent synthetic material, .
2. Sight window according to claim 1, characterized in that the translucent synthetic material is introduced into the opening by injecting, casting or pressing and is applied on its border.
3. Sight window according to claims 1 and 2, characterized in that the e. g. circular opening is divided into smaller, e. g. segment or sector shaped openings by bridges of the container wall such that despite the increase of the mechanical strength the recognition of the liquid level is not hindered.
4. Sight window according to claims 1 to 3, characterized in that the limiting ring of the container wall surrounding the opening comprises openings distributed at its periphery or that it is roughened at its rim, respectively.
